Forecast for Saturday 21 Oct 2023

Weather: A cloudy day with rain, sleet and snow at times, this heaviest and most persistent across northern and eastern Argyll and southern Lochaber. Snow will fall down to 800 metres, with a risk of blizzard like conditions on the higher summits in the morning. Snow will increasingly turn to rain at all levels by mid-afternoon as warmer air arrives from the southeast. Turning drier from the south through the afternoon into the evening.

Chance of cloud-free hill tops above 800m: 30%, best chance across Arran in the afternoon

Low Cloud and visibility: Widely poor in extensive low cloud down to 500 to 800 metres, highest cloud bases along the west coast. Whiteout conditions expected in snow for a time. Low cloud may clear from the south of the region from late afternoon onwards.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View

Be prepared for wintertime conditions in the morning with snow, poor visibility and severe wind chill. Very strong winds in the morning will lead to a risk of being blown over, and winds across the higher Nevis ranges may reach storm force at first. Icy surfaces can be expected at height.

Forecast for Sunday 22 Oct 2023

Weather: A much drier and less windy day with cloud breaking to leave brighter skies by afternoon. Some showers around first thing otherwise mostly dry with just a passing light shower in the afternoon.

Maximum wind: Westerly 20 mph

Chance of cloud-free hill tops above 800m: 70%, best chance in the afternoon

Low Cloud and visibility: Areas of cloud down to 600 metres at first across the north, this clearing away northeast through the morning to leave very good visibility with only small amounts of cloud above 750 metres by afternoon

Temperature: **Glens:** Plus 3 rising to 8 Celsius
At 800m: Plus 5 Celsius
Freezing level: 1200 to 1500 metres
